

# MOONSHOT

An ambitious and exploratory, community driven experiment in the DeFi space.

Running on top of a

Frictionless Yield & Liquidity Generation Protocol

v1

## The MOONSHOT Token

MOONSHOT is a frictionless yield and liquidity generation smart contract that applies 10% fee for each transaction and instantly splits that fee into two parts; it rewards holders with 4% and 6% is added to the Pancake liquidity pool. Holders don't need to do anything other than just to hold MOONSHOT tokens in their wallets to gain rewards. This means, that the amount of tokens in your wallet increase as other people transact. Additionally, the liquidity pool continuously increases which leads to a higher price floor of MOONSHOT.

At the same time, our burn address participates as a holder in this mechanism. Every time the reward is distributed, the burn address receives a part of the fee and these tokens are removed from the total supply. This increases the scarcity of every MOONSHOT token in circulation. This means, that every time that MOONSHOT is used, the value of the remaining MOONSHOT tokens in circulation is increased by simultaneously decreasing the supply. This makes MOONSHOT a deflationary token.

### Moonshot protocol

The Moonshot protocol:

- 4% fee is redistributed to all existing holders
- 6% fee is split 50/50. Half of which is sold by the contract into BNB while the other half of the MOONSHOT tokens are paired automatically with the previously mentioned BNB and added as a liquidity pair on Pancake Swap.

### Reward distribution

Simply hold MOONSHOT in your wallet and gain rewards when others transfer.

As mentioned, in the Moonshot protocol, 4% of each transaction is distributed among MOONSHOT holders. This increases the incentive to hold the tokens in the wallets. To buy and hold, as the key to success inspired by WallStreetBets. As more transactions take place in the network, the net worth of every individual increases as well.

### Automatic Liquidity Pool

Automatic LP is a key element in MOONSHOT. This is a two-fold beneficial function for holders. First, the smart contract, takes a percentage of the tokens from sellers and buyers alike and adds them to the LP, creating a solid price floor. Second, the penalty acts as an arbitrage resistant mechanism that secures the volume of MOONSHOT as a reward for the holders. The added LP creates a stability from the supplied LP by adding the tax to the overall liquidity of the token, increasing the tokens overall liquidity and supporting the price floor of the token. The goal here is to prevent larger dips when whales decide to sell their tokens.

## Manual Burn

We have manual burns. These burns are controlled by the team and promoted based on achievements to keep the community rewarded and informed. The conditions of the manual burn and its amounts can be advertised and tracked. Moonshot aims to implement a burn strategy that is beneficial and rewarding for those engaged for the long term. The total number of Moonshot burned is featured on our website which allows for further transparency in identifying the current circulating supply at any time.

Moonshot tokens	Date	Event
10,200,000,000,000	March 30, 2021	500 Holders
7,234,109,166,240	March 31, 2021	1000 Holders
16,368,860,558,443	April 1, 2021	Recommendation by Solidity.Finance
2,468,403,134,712	April 4, 2021	2000 Holders
2,350,959,481,475	April 5, 2021	3000 Holders
2,242,254,588,085	April 7, 2021	5000 Holders
2,135,076,739,984	April 9, 2021	10000 Holders

Token burning will continue as we reach new milestones. The next token burn is at 20,000 holders. The community votes on the amount of tokens to be burned as a percentage of the tokens left in the deployer address.

## The Smart Contract

The smart contract contains functions to exclude addresses from receiving rewards as well as to exclude addresses from paying taxes. This allows us to exclude addresses like Pancake Swap from receiving rewards or paying taxes. We have not (yet) renounced ownership of the contract.

## Tokenomics

Total supply	1,000,000,000,000,000
Circulating supply	626,634,839,857,721
Burned forever	373,365,160,142,280

## Token distribution

The pie chart illustrates circulating and burned supply, as it is on April the 9<sup>th</sup> 2021. We still have 4% available for manual burns and the Moonshot protocol has already burned 2% of the total supply.

This chart illustrates the deflationary characteristic of the Moonshot token; Over time less tokens will be in circulation.

## Presale

The Moonshot presale was launched on the Dxsale.Network on March 27, 2021. With no pre-marketing, the presale completed in just two hours. No tokens have been reserved for the team and limits have been put in place to create a launch as fair as possible.

Hard cap	100 BNB
Soft cap	10 BNB
Maximum allocation per wallet	2 BNB
Presale price	1 BNB = 4,000,000,000,000 MOONSHOT
Listing price	1 BNB = 2,500,000,000,000
Liquidity Lock	80% for 3 years

After the tokens had been distributed, 313,000,000,000,000 MOONSHOT tokens were manually burned which is about 31% of the total supply.

## The community

The endless energy and creativity of our community, the desire to help each other to reach project milestones is our biggest strength and motivator. We promote individual and collective efficacy, community empowerment and community (self) organization. While we continue to build our platform, substantial effort will be put in creating transparency towards our community. Having transparency allows us to inspect and adapt to the changing market when needed.

## The Use cases

### MoonBoxes (Q2)

On our platform, you will be able to open Moonboxes. Moonboxes are virtual boxes that contain NFT's (Non-Fungible Tokens). These NFT's are specifically made for this project by highly skilled artists. The theme is: Space.

The first series of NFT's that will be inside the MoonBoxes are limited to 10.000 pieces. These NFT's differ in rarity.

#### First Episode 'The MoonShooter'

Our journey starts with The Moonshooter walking confidently to his rocket. As he boards his rocket, The Moonshooter's vision turns inward and he can barely hold his ground as he holds himself on a nearby railing. He cannot fathom the flashes of lights that strike his vision as he can barely hold his footing. His vision returns to normal after what seems like hours but are mere seconds. The Moonshooter is struck by the event but he is determined to make his journey. Our traveler seats himself, finalizes all his pre-flight checks and fires up the engines. The exhaust flares up in thunderous flames and the rocket leaves the earth. Thousands of bystanders are watching in awe as the rocket shoots through the ozone layer cheering for The Moonshooter. Our traveler breached the Earth's atmosphere, he has locked his rocket to go to his destination,

The Moon. After the rocket makes landfall on The moon our traveler exits the craft and puts down a flag with the MoonShot emblem emblazoned upon it. The traveler begins his exploration of the barren moon. After some time of walking, he notices flashes in the distance which draws his attention. The flashes reminds The Moonshooter of the odd vision he had when entering his rocket. As he gets closer, the flashes intensify and he sees a peculiar looking box (MoonBox). His curiosity outweighs his caution, and he picks up the MoonBox. In the process of picking it up he tears his glove, a fact of which he remains ignorant. Suddenly, the box starts shaking and springs open violently. The Moonshooter doesn't quite know what just happened to him and he returns to the box (Moonbox). Inside he finds a small artifact which reflects the moon. The moment his fingers touch the surface of this artifact he starts trembling and the traveler is pushed back by a strong force and lands on his back. His vision turns inwards again, this time The Moonshooter can see clearly. A hand approaches our traveler in a peaceful manner and he feels a sensation which he never felt before. He blindly trusts the approaching hand. As he merely touches the hand his vision returns to normal again. Some time after passing out he regains his consciousness and gets an eerie feeling that something's changed, he feels different somehow. He removes his gloves and notices his hands are made of diamond. The precious gemstone glinting in the light.

## Lottery (Q3)

On our platform, you will be able to participate in the Moon Lottery. This is a provable fair and cryptographically secured Lottery for the risk takers. The tickets can be bought with BNB and a small fee is subtracted for charity. The community will vote on which charity we will send the funds to and how much.

## Gamification (Q3)

On our platform, you will be able to play old school Arcade style games. One of the first games we will be prototyping is Moonshot Shooter. When you connect your wallet to the game, you will be able to fly your NFT spaceship. There will be a leader board listing the top high scores by wallet addresses of the players in the community. The prototype will be developed as a web app.

## Roadmap

### Q1

- Moonshot initiated
- Presale completed
- 31% of the total supply burned after launch
- Delta listing
- Blockfolio listing
- Coinmarketcap tracking
- Manual burning of tokens

### Q2

- Building social media presence
- Trust wallet integration
- BSCScan verification and social media links
- Listing at an Exchange
- Coingecko tracking
- PancakeSwap
- Merchandise and Moonshot branded wearables
- Moonboxes

### Q3

- Lottery Pools
- Arcade style games
